Fuel Cell Core Technology

*Technology Transfer*

Core Technology Program

# Core Technology Program Powering All Ships

- **Materials**
- **Modeling and simulation**
- **Fuel processing**

- **Power electronics**
- **Controls and diagnostics**
- **Manufacturing**

# Intellectual Property

## *Cornerstone of the Alliance*

- **Non-Exclusive License**   **Industry Teams**
  - Open for 1 year after issue of a U.S. patent
  - Ready market of potential licensees
  - Best designs vs. highest bidder
  - Dispute Resolution Mechanism
- **Promotes Collaboration - Limits Duplication**
- **Pilot program; reevaluate after 2 years**

# Solid Oxide Fuel Cell

# The Vision: *Fuel Cells in 2010*

**Low Cost/High Volume**  
**\$400/kW > 50,000 units/yr**

# Different Approaches!

<i><b>Team</b></i>	<i><b>Design</b></i>	<i><b>Manufacturing</b></i>
<b>Cummins-SOFCo</b>	<ul style="list-style-type: none"> <li>• Electrolyte supported</li> <li>• 850 C</li> <li>• Thermally matched materials</li> <li>• Seal-less stack</li> </ul>	<ul style="list-style-type: none"> <li>• Tape casting</li> <li>• Screen printing</li> <li>• Co-sintering</li> </ul>
<b>Delphi-Battelle</b>	<ul style="list-style-type: none"> <li>• Anode supported</li> <li>• 750 C</li> <li>• Ultra compact</li> <li>• Rapid transient capability</li> </ul>	<ul style="list-style-type: none"> <li>• Tape casting</li> <li>• Screen printing</li> <li>• 2-stage sintering</li> </ul>
<b>General Electric Company</b>	<ul style="list-style-type: none"> <li>• Anode supported</li> <li>• 750 C</li> <li>• Hybrid compatible</li> <li>• Internal reforming</li> </ul>	<ul style="list-style-type: none"> <li>• Tape calendering</li> <li>• 2-stage sintering</li> </ul>
<b>Siemens Westinghouse</b>	<ul style="list-style-type: none"> <li>• Cathode supported</li> <li>• 800 C</li> <li>• Redesigned tubular</li> <li>• Seal-less stack</li> </ul>	<ul style="list-style-type: none"> <li>• Stack extrusion</li> <li>• Plasma spray</li> </ul>

# Two New Different Approaches!

<b><i>Team</i></b>	<b><i>Design</i></b>	<b><i>Manufacturing</i></b>
<b>Acumentrics Corporation</b>	<ul style="list-style-type: none"><li>• Anode supported microtube</li><li>• 750 C</li><li>• Thermally matched materials</li><li>• Robust &amp; rapid start-up</li></ul>	<ul style="list-style-type: none"><li>• Extrusion</li><li>• Dip processing</li><li>• Spray deposition</li></ul>
<b>FuelCell Energy, Inc.</b>	<ul style="list-style-type: none"><li>• Anode supported</li><li>• &lt; 700 C</li><li>• Low cost metals</li></ul>	<ul style="list-style-type: none"><li>• Tape casting</li><li>• Screen printing</li><li>• Co-sintering</li><li>• Electrostatic deposition</li></ul>

# SOFC Materials Costs

SOFC Component	Material Cost (\$/kW)
<i>Common Materials (excluding interconnects)</i>	
Ni/ZrO <sub>2</sub> anode (500 microns)	11.67
ZrO <sub>2</sub> /Y <sub>2</sub> O <sub>3</sub> electrolyte (10 microns)	0.40
LaMnO <sub>3</sub> cathode (50 microns)	2.30
ss End Plates (1.25 centimeters)	0.70
<i>Subtotal Common Materials</i>	<i>15.07</i>
Ceramic Interconnect (2.5 millimeters)	137.50
<i>Subtotal Ceramic Interconnect &amp; Common Materials</i>	<i>152.57</i>
50% Contingency	76.28
<b>Total Material Costs Using Ceramic Interconnects</b>	<b>228.85</b>
Metallic Interconnect (2.5 millimeters)	6.67
<i>Subtotal Metallic Interconnect &amp; Common Materials</i>	<i>21.74</i>
50% Contingency	10.87
<b>Total Material Costs Using Metallic Interconnects</b>	<b>32.61</b>

# Current Priorities: *Core Technology Program*

1	Gas seals	<ul style="list-style-type: none"><li>• Glass and compressive seals</li></ul>
1	Interconnect	<ul style="list-style-type: none"><li>• Modifying components in alloys</li><li>• Coatings</li></ul>
2	Modeling	<ul style="list-style-type: none"><li>• Models with electrochemistry</li><li>• Structural characterization</li></ul>
2	Cathode performance	<ul style="list-style-type: none"><li>• Micro structure optimization</li><li>• Mixed conduction</li><li>• Interface modification</li></ul>
2	Anode/ fuel processing	<ul style="list-style-type: none"><li>• Metal oxides with interface modification</li><li>• Catalyst surface modification</li><li>• Characterize thermodynamics/kinetics</li></ul>
3	Power electronics	<ul style="list-style-type: none"><li>• Direct DC to AC conversion</li><li>• DC to DC design for fuel cells</li></ul>
4	Material cost	<ul style="list-style-type: none"><li>• Lower cost precursor processing</li><li>• Cost model methodology</li></ul>

# SECA Budget (\$M)

- Industry Teams
- Core Technology Program

# Core Technology Program FY 2003

# Stack Technology – Seals & Cross Cutting

PNNL – Seals, Modeling and Analysis, Cathodes, Anodes, Interconnects, Fuel Processing

LBNL – Metallic supported cell structure, Cathode interface modification

ANL – Metallic supported cell structure, Interconnects, Fuel Processing

# Materials - Interconnects

## Develop low temperature interconnect suitable for SOFC
